1.Evaluation of product and process

1.1. Product

To begin the evaluation of the product, it's evident that we've successfully fulfilled the majority of the "Coursework" requirements. The user login management system is equipped with fundamental features, including role division and account management. Additionally, the website layout has been crafted to prioritize simplicity and clarity, aligning with the design specifications. As I primarily focused on developing the user login management system and designing the front-end for both the homepage and the admin dashboard, I'm aware of my bias and won't provide an extensive rating. Nonetheless, it's clear that our product meets essential criteria and functions effectively.

Regarding the remaining pages and functionalities, it's evident that team members have successfully implemented most of the basic functions outlined in the "Coursework" requirements. The design of these additional pages reflects a high level of proficiency and attention to detail, which is commendable. The decision to utilize the same layout across various sections of the website has streamlined the design process, allowing for consistency and efficiency. By leveraging the admin dashboard layout I created as a template, other team members were able to easily adapt and customize it to fulfill their respective design requirements. Overall, while there are areas for further development, particularly in refining certain points and functionalities, our team's collective efforts have produced a product that meets the necessary standards. I would rate our product as above average, acknowledging its strengths while also recognizing opportunities for enhancement.

1.2. Process

In evaluating our team's process, it's evident that commendable collaboration, communication, and task management skills were demonstrated overall. However, there were challenges posed by certain individuals who displayed uncooperative behavior, leading to difficulties in certain aspects of the project. I'll elaborate further on this in the "Evaluation of Team" section. Regular team meetings were conducted to facilitate the completion of product functions, with roles clearly defined and responsibilities effectively delegated. Nonetheless, there were instances where certain members struggled with punctuality and attendance, which impacted our ability to meet deadlines for their tasks. Additionally, while communication within the group was generally strong, there's room for improvement in ensuring the cohesion and active participation of every team member. Promoting greater engagement and accountability among all individuals will be crucial for fostering a more cohesive and productive team environment in future projects.

1.3. Summary

Overall, while our product met my expectations and allowed team members to showcase their technical proficiency, there are areas within the process that require improvement for future projects. Implementing more rigorous testing processes, enhancing time management strategies, and fostering greater team member engagement are crucial steps toward achieving even more successful outcomes in future endeavors. These improvements will not only enhance the quality of our deliverables but also contribute to a more efficient and collaborative project environment.

2.Evaluation of team

Member	Evaluation	Self-Evaluate
Nguyen Le Minh Thanh (Scrum master, Information architect, Tester)	He juggles roles as Scrum master, Information architect, and Tester. With a strong sense of duty, he coordinates team tasks and assists others. He also manages group reports, assigns writing tasks, and tests the product upon completion.	9
Le Thai Trung Tin (Programmer, Database designer, Tester)	He's the most seasoned member in our group, holding roles as Programmer, Database designer, and Tester. Always offering guidance for sound decisions, he tackles the toughest task at the project's outset: database design. His dedication to completing tasks is unwavering.	10
Dang Viet Minh Man (Programmer, Web designer, Tester)	I work in the roles of Programmer, Web Designer, and Tester. With my MVC expertise, I support team members and complete tasks quickly. Working closely with my partner, we optimize the project's functionalities. I always try to complete tasks as soon as possible to support other team members.	8.5
Tran Luong The Bao (Programmer)	He is the Programmer in our team, usually completing his tasks well. However, there are cases where he needs a lot of help from others. He is a diligent person who works hard and is willing to learn. Although his technical level is not high, he is very diligent in learning and tries to complete assigned tasks on time.	8
Thai Ngoc Thinh (Programmer)	He is also the Programmer in the team, usually handling his work competently. But he rarely participates in team meetings. He always completes	7.5

	assigned tasks well, his technical level is also quite good, but he rarely participates in group activities so that will be a huge minus point. I don't appreciate working individually while working in a group, so I also don't appreciate his team spirit.	
Nguyen Xuan Truong (Web designer)	As the web designer on the team, his approach to work didn't sit well with me. He tends to offload the heavy lifting to his partner, lacks consistent collaboration with the team, and only starts working when the sprint reporting deadline nears. Complete tasks on time. What's more worrying is that his attitude and communication style always make other team members uncomfortable. With these comments, I cannot accept his way of working so I will rate him lower than others.	5

Factor	Nguyễn L.M.Thành	Lê T.T.Tín	Đặng V.M.Mẫn	Trần L.T.Bảo	Thái N.Thịnh	Nguyễn.X .Trường

3. Self-evaluation

3.1. My contribution

Throughout the project, I acted as a Programmer, contributing significantly to many different aspects of our team's efforts. Working closely with Le Thai Trung Tin, I focused on the complexities of backend development, led the design and implementation of a robust user login management system, and meticulously organized the Assign roles to log in. At the same time, I am in charge of website development, creating both the homepage and dashboard layouts to exact specifications, ensuring they fit perfectly with the project's requirements. My commitment to meeting deadlines is unwavering, always completing assigned tasks on time, which proves vital in maintaining project momentum. Additionally, I undertake the essential responsibility of testing our team's products, ensuring their functionality and quality meet required standards before deployment. In addition to implementation, I actively contributed to project documentation efforts, assisted with wireframe creation, and developed use case diagrams with Nguyen Le Minh Thanh. Throughout our collaboration, my regular attendance and active participation in team meetings facilitated seamless communication and collaboration, fostering a productive work environment. efficiency and engagement for our team.

3.2. Lesson learns from project

Through my participation in this project, I have gained invaluable insights that have contributed significantly to my personal and professional development. First, I learned the importance of effective communication and collaboration in a team environment. Working closely with my team members, like Le Thai Trung Tin and Nguyen Le Minh Thanh, has emphasized the importance of open dialogue and collaborative efforts to achieve our common goals. Additionally, I recognize the need to acknowledge and address my own limitations, especially in managing important tasks as well as the importance of continuously learning and developing my skills. ability to overcome these challenges. Furthermore, observing the activities and communication patterns of my colleagues provided valuable insights, emphasizing the value of diversity and adaptability in team environments. Ultimately, I learned important lessons about maintaining composure in group activities, understanding the importance of flexibility in overcoming challenges, and promoting harmony within the group. Overall, this project experience not only enhanced my technical skills but also honed my interpersonal communication abilities, creating a solid foundation for future endeavors.
